Additional Resources: Linear models

This reference document is designed to complement and enhance the material we have covered on linear models. It contains an additional tutorial on simple linear regression and cheat sheets for the Scikit-Learn, Matplotlib and Seaborn libraries.

References:

1. A cheat sheet on the Python library Scikit-Learn.

- Scikit-Learn cheat sheet

2. A cheat sheet on the Python visualisation library Matplotlib:

- Matplotlib cheat sheet

3. A cheat sheet on the Python library, Seaborn, for creating statistical graphics:

- Seaborn cheat sheet

4. A tutorial that delves into simple linear regression, estimating parameters by least squares, calculating the standard error, and using this to compute confidence intervals:

- Simple linear regression tutorial
